Monochrome printing | ineo 266 / ineo 306

Multitude of features in a small footprint

ineo 266 and ineo 306: A3 monochrome multifunctionals round off DEVELOP line-up

Langenhagen, Germany September 2016 - For small to mid-sized offices, print shops and public-sector institutions a multifunctional device needs to combine functionality, flexibility and ease of use. A compact design is also useful as space is often limited in such work environments. These are precisely the qualities the new monochrome ineo 266 and ineo 306 systems from DEVELOP have to offer.

“An office device that reliably delivers high-quality output will raise productivity in any office environment,” says Product Planning Manager Jürgen Dobbbrunz. “The new ineo 266 and ineo 306 do exactly that while helping companies to reduce the environmental impact of their printing or copying.”

Compact capability

Although the compact design of both systems ensures they will nicely fit into any office, however limited space may be, their small footprint does not come at the expense of performance. The standard features include functions such as duplex printing, network interface and universal PCL printing. These new arrivals round off DEVELOP's monochrome office line-up and offer a high performance level: a maximum of 26 ppm from the ineo 266 and 30 ppm from the ineo 306.

Convenient usability

As mobile working becomes increasingly commonplace in office environments, the ability to print straight from a tablet or smartphone is really a must for any new office system. The ineo 266 and ineo 306 do not disappoint. Mobile workers can easily print from and scan to their mobile devices without installing a driver. The dedicated mobile app, ineoPRINT, from DEVELOP is all they need. Wireless LAN support is another convenient option that allows a system to be integrated into a work environment without LAN wiring. Users can also print and scan wirelessly to and from a PC or mobile device. Furthermore, the ineo 266 and ineo 306 enable mobile workers to print and scan to and from a plugged-in USB stick.

Cool flexibility

The paper capacity of both systems can be increased, if required, to a maximum of 1,350 sheets, which saves users time otherwise spent on refilling paper. As both systems can be equipped with up to five paper trays, jobs can be produced on a variety of different media and users can easily select the paper they need.

Last but not least, both systems are energy efficient, use a toner partly made from biomass and meet the latest eco standards. That way they help to minimize the environmental impact of printing.
