ineo SECURE

Our service for your peace of mind

How can you make sure your corporate data and valuable company information is safe and protected against data theft? DEVELOP's answer to this is the reliable protection of ineo SECURE: together with you, we determine which of our industry-leading security standards are right for you. With this set of security measures, we give your ineo devices an extra level of protection.

Just what you need – secure data

You might have read recent reports that questioned the security standards of some multifunctional office systems. And you're right to be asking some critical questions: "How can I be sure my valuable data are safe from theft?" or "How can I prevent data being stolen from my multifunctional device or extracted when the hard drive is removed?" The questions are far-reaching, but the answer is simple. If your multifunctional device is an ineo from DEVELOP, all there is to do is activating the devices built-in security features. That can be done on your premises – or prior to delivery if you haven't yet decided which device to buy. Once ineo SECURE safeguards are in place, you can be sure your print data will enjoy uncompromising security protection. Your ineo multifunctional device and its hard drive (HDD) will be protected to ensure your data is more than just secure – they'll be ineo SECURE!

3 key considerations for your printing security

1. Authentication

Is accessing your printing facilities safe?

2. Data protection

What happens to your data after you send it to print?

3. Automated rules enforcement

Are your safeguards still in place?

ineo SECURE covers these three areas and gives you peace of mind when it comes to your printing security.

Your most valuable – and vulnerable – business assets

Of all your business assets it is quite possible that your data is the most valuable – and most vulnerable. But securely safeguarding those assets could not be simpler: ineo SECURE protects your documents, data and corporate information, thus avoiding any potential damage to your company's finances and reputation.

Reassuring peace of mind

Hackers can relatively easily access devices if the default password has never been changed. So we make sure each admin password is changed from default mode to a unique and secure password to prevent unauthorised access. We also equip each ineo device with a control mechanism to ensure the admin password is most securely set, i.e. with a sufficiently safe combination of characters and numbers.

How to avoid security breaches

Since the risk of security breaches is rising dramatically, we have made print data security a top priority for our business devices and services.

Password-protected documents and hard drive – no data can go astray

Business-critical documents can be stored in a password-protected box or folder on the ineo device's hard drive. If you want an even higher level of security, the hard drive can be encrypted to prevent data being read, even if the hard drive is removed. Though it isn't easy to remove a hard disk from an office device, an ineo hard disk can be locked in via an extra password that makes it impossible to read or access the data if the drive is removed and installed elsewhere.

Automatic deletion of print jobs

When documents are printed in your business, lots of potentially confidential data gets sent to the printer and temporarily stored. To prevent access to such data, ineo SECURE can be set to automatic deletion mode – yet another way of safeguarding business-critical data on your ineo device.

Continuous real time status of your security settings

For your peace of mind you can choose an optional application that highlights at a glance if all your security settings are still in place and re-enforced.

The simple route to secure data

- How do DEVELOP customers activate the award-winning security features in their ineo?

Simple. They ask DEVELOP to do it for them.
