

## Press release

Monochrome production printing | ineo 1100

### **ineo 1100 – many improvements on successful predecessor**

#### **Entry-level production printing system with numerous professional features**

**Langenhagen, 12 February 2016 - There's always room for improvement – even on such a successful system as the ineo 951, the entry-level production printing system DEVELOP launched in 2012. Its successor, the ineo 1100, offers new applications and functions, a faster turnaround time, a colour scanner and a flexible OpenAPI interface. This new monochrome system is ideally equipped to deal with the frequently changing jobs in on-demand production printing environments.**

“The ineo 1100 features a highly reliable print engine with the durability that comes from proven technology,” says product manager André Statkus. “This print system is 5 ppm faster than its predecessor and displays great media flexibility in handling a wide range of different print jobs. Another highlight is its high scalability thanks to the open-platform OpenAPI interface.”

#### **Built for high productivity**

With a high monthly print volume, the ineo 1100 is ideally equipped to handle the production printing demands of internal printrooms, digital print service providers and other high-volume printing environments. The device's high productivity ensures short turnaround times, which is a big benefit when tackling time-critical print jobs. Since the vast majority of high-volume jobs in this segment are still printed in black and white, the ineo 1100 offers all that is required of an entry-level monochrome production printing system – with the added advantage of a colour scanner, which scans documents in a single-path duplex operation at up to 180 ipm. What's more, the output speed of ineo 1100 does not come at the expense of quality. A genuine resolution of 1,200 x 1,200 dpi, unique screening technology and customised professional-quality tone curve and screening adjustments (based on an upgraded tone curve utility) ensure outstanding output quality.

#### **Designed for flexibility**

With a maximum paper capacity of 9,000 sheets in five cassettes and a newly developed bypass tray where 250 sheets can be inserted, the ineo 1100 is well equipped for any high-volume print job, and even extensive mixed-media jobs can be handled easily. The device's media flexibility – a standard grammage range of 40-300 g/m<sup>2</sup> (optionally up to 350 g/m<sup>2</sup>) and paper formats from 92 x 132 mm to SRA3 (max. 324 x 483 mm) – enables the ineo 1100 to tackle just about any job a production printer is likely to face.

This print system's flexibility is also evident in the professional finishing options DEVELOP offers: production of up to 100-page booklets with automatic ring binding; 2-point and choice-of-corner stapling for up to 100 sheets; 2- or 4-hole punching (also for post-inserted documents); Z-folding for

inclusion of A3 documents in A4 printouts; letter folding for up to three pages; and a newly developed output tray for offline finishing or where no finisher is needed. The optional GBC punch unit comes with a wide range of die sets to ensure compatibility with most popular punching schemes, e.g. metal-based (wire) or plastic (comb) binding.

### **Programmed for communication**

The ineo 1100 is the first production printing device from DEVELOP to support Konica Minolta's OpenAPI technology, which allows developers to create applications that communicate with this print system. As a result, customers can use third-party accounting, authentication or scan-routing applications, such as YSoft SafeQ or Nuance eCopy Sharescan, in combination with this printer. Since all this print system's powerful features can be controlled via an easy-to-operate touchscreen, the ineo 1100 represents a successful symbiosis of professional-quality printing, uncomplicated usability and extensive utility.
